

IDE interface showing a Java project named "Clinic". The main editor displays the `MainClinic.java` file, which contains a `public class MainClinic` with a `main` method. The code initializes repositories and prints patient information. A comment indicates a screenshot of a `DeleteAllException` PDF.

```
public class MainClinic {
    public static void main(String[] args) {
        MedserviceRepository medserviceRepository = new MedserviceRepositoryJdbcTemplateImpl(dataSource);
        AppointmentRepository appointmentRepository = new AppointmentRepositoryJdbcTemplateImpl(dataSource);
        ScheduleRepository scheduleRepository = new ScheduleRepositoryJdbcTemplateImpl(dataSource);

        System.out.println("ПАЦИЕНТЫ");
        //Список всех пациентов
        System.out.println("Все пациенты:");
        patientRepository.findAll().forEach(System.out::println);

        System.out.println("*****");
        System.out.println("Удаление всех пациентов: "); //схрин DeleteAllException.pdf
        //patientRepository.deleteAll();

        System.out.println("*****");
        System.out.println("Поиск пациента по id с жестким исключением: ");
        //patientRepository.find(133L);
    }
}
```

The right sidebar shows the "Database" tab, displaying a connection to "healthcare@localhost" with a "public" schema containing tables like "appointments", "doctors", "medical_records", "patients", "schedules", and "services".

The bottom panel shows the "Run" output, indicating an exception occurred during the execution of the `main` method:

```
Exception in thread "main" ru.natali.clinic.exception.patientexception.PatientNotFoundException: Пациент с id=133 не найден
    at ru.natali.clinic.repository.impl.PatientRepositoryJdbcTemplateImpl.find(PatientRepositoryJdbcTemplateImpl.java:133)
    at ru.natali.clinic.app.MainClinic.main(MainClinic.java:42)
Caused by: org.springframework.dao.EmptyResultDataAccessException: Incorrect result size: expected 1, actual 0
    at org.springframework.dao.support.DataAccessUtils.nullableSingleResult(DataAccessUtils.java:194)
    at org.springframework.jdbc.core.JdbcTemplate.queryForObject(JdbcTemplate.java:899)
    at ru.natali.clinic.repository.impl.PatientRepositoryJdbcTemplateImpl.find(PatientRepositoryJdbcTemplateImpl.java:131)
    ... 1 more

Process finished with exit code 1
